LESSON 2

AUG 4, 2026

Planned representative-transfer lesson with a deliberately descriptive synthetic title

Completed

Review the current contact window, preserve the golfer's stated priorities, and choose the next bounded evidence task.

COACH OBSERVATION

The selected synthetic sample showed a wider strike window when transition tempo increased.

TAKEAWAY

Keep the comfortable tempo and use strike location as the immediate feedback signal.

NEXT CHECK

Repeat the representative set before changing the task.

[illegible]

The synthetic golfer reported that the reset made the target decision easier to repeat.

This lesson establishes evidence for the current phase review.

- Selected launch-monitor comparison context · Comparison · The bounded comparison supports continuing the current priority while gathering more representative evidence.

- Use the selected values only as bounded context for the coach-authored current priority.

[illegible]

Ball Speed: 131.2 mph · Carry: 205 yd ·

Launch Angle: 14.1 deg

appeared more often in the final synthetic set, while higher tempo still widened the pattern.

TAKEAWAY

Preserve the comfortable tempo and use strike location as the immediate feedback signal. Preserve the comfortable tempo and use strike location as the immediate feedback signal. Preserve the comfortable tempo and use strike location as the immediate feedback signal. Preserve the comfortable tempo and use strike location as the immediate feedback signal. Preserve the comfortable tempo and use strike location as the immediate feedback signal.

Preserve the comfortable tempo and use strike location as the immediate feedback signal. Preserve the comfortable tempo and use strike location as the immediate feedback signal. Preserve the comfortable tempo and use strike location as the immediate feedback signal.

NEXT CHECK

Repeat the representative set before changing the task.

PHASE CONNECTION

This lesson remains connected to the current phase priority.

PRACTICE DIRECTION

One focused task before more complexity.

Practice is coach-authored and should match the current phase and available evidence. This bounded view shows up to 8 items, prioritizing current-phase direction before the newest retained history.

1

ACTIVE

Editable representative centered-contact window with complete synthetic guidance

Make four swings at a comfortable tempo. Record only the agreed strike-location feedback. Reset fully before the next set. Stop if discomfort or uncertainty appears.

Three bounded sets of four synthetic repetitions, with a complete reset and written observation between sets.

Look for: The agreed strike window repeats in the coach-defined representative set.

Full drill guidance

Purpose: Observe whether a comfortable-tempo strike window repeats without chasing speed or a promised result.

When it fits: Use only when it matches the coach-observed current priority and the golfer understands the feedback signal.

Equipment: Comfortable club, Representative target, Strike-location feedback

Setup: Choose one ordinary target, establish a comfortable setup, and confirm that the strike feedback is understandable.

Steps

1. Make four swings at a comfortable tempo.
2. Record only the agreed strike-location feedback.
3. Reset fully before the next set.
4. Stop if discomfort or uncertainty appears.

Feel or cue: Comfortable tempo; no universal swing cue is prescribed.

Common miss: Adding speed or changing the target after one centered strike.

Stop and ask: Stop and ask the coach if discomfort appears or the task, feedback, or purpose becomes unclear.

Adaptation: Use a comfortable club and stop if the task, feedback, or physical response becomes unclear.

Progression: Only after coach review, add one ordinary target constraint without changing the feedback signal.

Regression: Return to a shorter comfortable-tempo set with a full reset between swings.

2

ACTIVE

Representative centered-contact practice window

Representative centered-contact practice window

Representative centered-contact practice window

Choose one representative target and a comfortable club. Complete three swings while observing strike location. Pause and reset before the next set. Stop if discomfort or uncertainty appears.

Three short sets with a full reset between sets.

Look for: The coach-defined strike window repeats without adding speed or changing the target after every swing. The coach-defined strike window repeats without adding speed or changing the target after every swing. The coach-defined strike window repeats without adding speed or changing the target after every swing. The coach-defined strike window repeats without adding speed or changing the target after every swing.
